## Cluster

#### For Ganeti, a cluster is

- virtual machines ("instances")
- on physical machines ("nodes") using some hypervisor (Xen, kvm, ...)
- and some storage solution (DRBD, shared storage, ...).

Introduction	Jobs
0.	0
00	0

#### **Cluster Management**

#### Ganeti helps

- to get there
  - uniform interface hypervisors/storage/...
  - policies, balanced allocation •

### Cluster Management

#### Ganeti helps

- to get there
  - uniform interface hypervisors/storage/...
  - policies, balanced allocation keeping N + 1 redundancy
- and to stay there
  - failover instances
  - rebalance
  - Restart instances after power outage

- gnt-node add -s 192.0.2.2 node2.example.com
- . . .
- gnt-instance add -t drbd -o debootstrap -s 2G --tags=foo,bar instance1.example.com

The -o debootstrap references the OS definition to be used. An OS definition essentially is a collection of scripts to create, import, export, ... an instance.

#### RAPI - Curl

Of course, you can just use with curl on the commandline:

> curl -k https://mycluster.example.com:5080/2/nodes
[{"id": "mynode1.example.com",
"uri":: "/2/nodes/mynode1.example.com"},
{"id": "mynode2.example.com",
"uri": "/2/nodes/mynode2.example.com"},

curl -k -X POST -H "Content-Type: application/json"
--insecure -d '{ "master\_candidate": false }'
https://username:password@mycluster.example.com:5080 \
/2/nodes/mynode3.example.com/modify

Introduction	Jobs	Locking	Deployment at Scale	Current and Future Development	Conclusion
00	0	00	0000	000	0
00	0		0000	000	
			000		

#### Hspace - Capacity Planning

Running clusters, you might want to know:

- How many more instances can I put on my cluster?
- Which resource will I run out first?
- How many new machines should I buy for demand X?

Hspace simulates resource consumption:

• It simulates to add new instances till we run out of resources

- Allocation done like with hail
- Start with maximal size of instance (according to ipolicy)
- Reduce size if we hit the limit for one resource

Introduction	Jobs	Locking	Deployment at Scale	Current and Future Development	Conclusion

#### Hspace - Cluster Simulation

> hspace --simulate=p,3,34052480,65523,24 \
 --disk-template=drbd --tiered-alloc=1048576,1024,8

The cluster has 3 nodes and the following resources: MEM 196569, DSK 102157440, CPU 72, VCPU 288. There are no initial instances on the cluster. Tiered (initial size) instance spec is:

MEM 1024, DSK 1048576, CPU 8, using disk template 'drbd'. Tiered allocation results:

- 33 instances of spec MEM 1024, DSK 1048576, CPU 8
- 3 instances of spec MEM 1024, DSK 1048576, CPU 7
- most likely failure reason: FailCPU
- initial cluster score: 0.0000000
- final cluster score: 0.0000000
- memory usage efficiency: 18.75%
- disk usage efficiency: 73.90%
- vcpu usage efficiency: 100.00%

Introduction	Jobs	Locking	Deployment at Scale	Current and Future Development	Conclusion
00	0	00	0000 0000 000	000 00 000	0

#### Ganeti Dedicated - Use Case

Use case:

• Offer machines to customers which require exclusive disk resources

G009

- No two instances using the same disks
- Solution could be to use bare metal, but ...

You still want the benefits of virtualization:

- A different OS than the standard host OS
- Easy migration if hardware fails

Ganeti Dedicated offers exactly that.

Introduction	Jobs	Locking	Deployment at Scale	Current and Future Development	Conclusion
00	0	00	0000	000	0
			000	õõo	

#### Ganeti Dedicated - Realisation

Setup:

- Use Ganeti nodes with LVM storage (plain or DRBD)
- Make sure no two physical volumes share the same physical disk
- Flag nodes in a node group with exclusive\_storage

Ganeti will:

- Not place more than one instance on the same physical volume
- Respect this restriction in operations like cluster balancing (hbal) and capacity planning (hspace)

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Introduction	Jobs	Locking	Deployment at Scale	Current and Future Development	Conclusion
00	0	00	0000	000	0
00	0		0000	00	
			00	000	
			000		

ExtStorage - Setup

Ganeti's integration of shared / distributed / networked storage

- All nodes have access to an external storage (SAN/NAS appliance etc.)
- Instance disks reside inside that storage
- Instances are able to migrate/failover to any other node
- The ExtStorage interface is a generic way to access external storage

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Introduction	Jobs	Locking	Deployment at Scale	Current and Future Development	Conclusion
	0	00			0
00	0		0000	00	
			00	000	
			000		

ExtStorage - Implementation

- For each type of appliance, Ganeti expected an 'ExtStorage provider'
- A bunch of scripts to do carry out these operations:
  - Create / grow / remove an instance disk on the applicance

- Attach / detach a disk to / from a Ganeti node
- SetInfo on a disk (add metadata)
- Verify the provider's supported parameters
- Parameters transmitted via environment variables

Introduction	Jobs	Locking	Deployment at Scale	Current and Future Development	Conclusion
00	0	00	0000	000	0
00	0		0000	00	
			00	000	
			000		

# ExtStorage - Examples

Assume you have two appliance of different vendors:

- /usr/share/ganeti/extstorage/emc/\*
- /usr/share/ganeti/extstorage/ibm/\*

Some example usages:

- gnt-instance add -t ext

   -disk=0:size=2G,provider=emc
   -disk=2:size=10G,provider=ibm
- gnt-instance modify --disk
   3:add,size=20G,provider=ibm
- gnt-instance migrate [-n nodeX.example.com] testvm1

gnt-instance modify --disk 2:add,size=3G,provider=emc,param5=value5

## Current Development - 2.10

- 2.10.7, available in debian wheezy backports
- KVM:
  - hotplug support
  - direct access to RBD storage
- Cross-cluster instance moves:
  - · automatic node allocation on destination cluster
  - convert disk templates on the fly
- Cluster balancing based on CPU load
- Ganeti upgrades

# Ganeti upgrades

Before:

- On all nodes:
  - /etc/init.d/ganeti stop
  - apt-get install ganeti2=2.7.1-1 ganeti-htools=2.7.1-1
- On the master node:
  - /usr/lib/ganeti/tools/cfgupgrade
- On all nodes:
  - /etc/init.d/ganeti start
- On the master node:
  - gnt-cluster redist-conf
- ... lots of other steps, depending on the version
- If something goes wrong, fix the mess manually.

Ganeti upgrades

From 2.10 on, Ganeti comes with a built-in upgrade mechanism:

- On all nodes:
  - apt-get install ganeti-2.11
- On the master node:
  - gnt-cluster upgrade --to 2.11
- To roll back:
  - gnt-cluster upgrade --to 2.10

Note that you still have to install the new and deinstall the old packages manually.

## Current Development - 2.11

- Current stable version, available in Debian Jessie
- RPC security: individual node certificates
- Compression for instance moves / backups / imports
- Configurable SSH ports per node group
- Gluster support (experimental)
- hsqueeze

#### hsqueeze

Huddle your instances during a cold cold night!

- Instances with shared storage (= live migration cheap)
- High load during peak times, low utilization otherwise
- Goal: During low utilization times, squeeze as many instances together as possible and shutdown unused nodes
- Use: Hsqueeze!
  - Calculates migration plan for instances
  - Aims to drain as many nodes as possible
  - But not too many to not cause resource congestion

- Uses hbal to calculate balanced load
- In 2.11, only planning; in 2.13 including execution

#### LXC

- LXC = Linux Containers
- Was experimental for a looong time (because nobody got time for it)
- Now: Google Summer of Code Project
- Goal: make it production ready, including a proper test chain

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

- Status: Going well, probably to be released in 2.13
- Works with LXC 1.0
- Live-migration still experimental

# Disk Template Conversions

- Ganeti offers various disk templates for instances:
  - file, lvm, drbd, sharedfile, external storage
- So far, converting between those is only partially fun
- Google Summer of Code Project to make conversions smooth
- Status: Going well, probably release in 2.13

#### The Future

No guarantees!

- Improved Jobqueue management
- Network improvements (IPv6, more flexibility)
- Storage: more work on shared storage
- Heterogeneous clusters
- Improvements on cross-cluster instance moves
- Improvements on SSH key handling
